

NEETESH RAJPOOT

Data Analyst | Python • SQL • Power BI • Machine Learning

📍 Bhopal, India | +91-6261804363 | neetesh03@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Results-oriented Data Analyst and CS graduate (B.Tech, 2026) with hands-on experience transforming raw datasets into actionable insights. Skilled in the full analytics lifecycle — data wrangling, statistical modeling, web scraping, and executive-level dashboard development. Adept at communicating findings to both technical and non-technical stakeholders.

TECHNICAL SKILLS

Languages	Python (advanced), SQL / MySQL, Java
Analytics & ML	Scikit-learn (Random Forest, Classification), NumPy, Pandas, EDA, Feature Engineering
Visualization	Power BI (DAX, drill-through, KPI cards), Seaborn, Matplotlib, Excel (PivotTables, VLookup)
Web Scraping	BeautifulSoup4, Requests, openpyxl — multi-page pagination, data cleaning & export
Tools	MySQL, Jupyter Notebook, Git & GitHub, VS Code, IntelliJ

FEATURED PROJECTS

HR Attrition Analysis, Prediction & Interactive Dashboard

Apr 2026 – May 2026

Tools: Python (NumPy · Pandas · Scikit-learn · Seaborn) · Power BI · DAX · Excel · Jupyter Notebook

- Engineered a full analytics pipeline on a 1,470-record HR dataset; performed EDA using Seaborn heatmaps, count plots, and distribution charts to surface attrition drivers across 9 departments and 20+ job roles.
- Trained a Random Forest Classifier achieving ~86% accuracy; extracted top-10 feature importances, reducing analysis scope by 40% to focus interventions on high-impact variables.
- Built a 5-page Power BI dashboard with KPI cards (Attrition Rate: 16.1% | Count: 237 | Avg. Satisfaction: 2.74/5) and department drill-through filters (HR · R&D · Sales) enabling stakeholder self-service.
- Implemented 8+ DAX measures for dynamic KPI calculations across gender-split and role-level attrition segments, reducing manual reporting effort by an estimated 3+ hours per reporting cycle.

Quotes Web Scraper

May 2026

Tools: Python (Requests · BeautifulSoup4 · Pandas · Matplotlib · openpyxl) · Jupyter Notebook · Git & GitHub

- Built a Python scraper to extract 100+ quotes, authors, and tags from quotes.toscrape.com with automated multi-page pagination and special character encoding handling (é, ü, ñ).
- Exported cleaned data to CSV and a styled Excel file (openpyxl) with frozen headers and landscape layout; generated a Top 10 Most Quoted Authors bar chart using Matplotlib.
- Organized project with modular notebook structure, requirements.txt, and auto-created output folders; published on GitHub as a portfolio-ready end-to-end scraping project.

Cricket Statistics Analysis Dashboard

Mar 2026 – Apr 2026

Tools: Python (NumPy · Pandas) · SQL · Power BI · Seaborn · Excel

- Consolidated multi-format cricket data (ODI, T20, Test) for 100+ players; designed an automated ETL pipeline using Python + SQL that reduced data preparation time by ~60% vs manual methods.
- Modeled key performance metrics — batting average, strike rate, bowling economy — and built 6 interactive visualizations comparing top performers, consistency trends, and head-to-head matchups.
- Delivered a Power BI dashboard tracking player form across 3 formats; demonstrated correlation between consistency metrics and team win rates for data-driven selection insights.

EDUCATION

B.Tech — Computer Science & Engineering (Data Science)

Jul 2022 – Jun 2026

Oriental College of Technology, RGPV, Bhopal, India | CGPA: 6.69 / 10

- Coursework: Data Structures & Algorithms, DBMS, Statistics, Machine Learning, Data Visualization. Final-year specialization in Data Science.

CERTIFICATIONS

- Introduction to Python — foundational programming and data manipulation.
- MySQL with Information Technology — relational database design, advanced queries, and joins.
- 30 Days Power BI Micro Course — SkillCourse (ISO 9001 Certified), May 2026 — DAX, report design, publishing.

WHAT SETS ME APART

- End-to-end ownership: all projects span data collection → cleaning → modeling / scraping → visualization — mirroring real analyst workflows.
- Business-impact framing: metrics reported as attrition rates, satisfaction scores, and cost-saving estimates — not just model accuracy.
- Continuous learner: completed 3 industry certifications while maintaining full academic coursework; actively building GitHub portfolio.
